RESEARCH PROFILE

I measure molecular composition in intact samples and check that the result holds on data the model has not seen. The unit has been a cell or a tissue region. My hands–on measurement experience is multiplexed protein and RNA detection in situ, single–cell and spatial profiling, high–parameter flow cytometry and binding analysis, and I write the analysis code that reads them, down to a custom caller when the standard tools cannot resolve something. At PB Immune Therapeutics I built the in–house single–cell, spatial and proteomic analysis capability and ran the therapeutic programs it fed. My current work is deep–learning multimodal integration of imaging, transcriptomic and clinical data.

POSITION–RELEVANT EXPERTISE

- **Cell–state calling from incomplete data.** Cell states resolved under ambiguity from single–cell and spatial data: **consensus NMF** gene programs, isoform and transcript resolution from short reads, embedding representations, and confidence reported per call rather than assumed.
- **Multi–modal integration of molecular identity.** Transcriptome for identity, chromatin and T–cell receptor repertoire for state and clonality, spatial data for location, and plasma proteome for the soluble compartment, brought into one cell–state–resolved model.
- **Multiplexed in situ and spatial measurement.** **GeoMx DSP** run end to end, **Visium**, **MACSima** cyclic multiplexed immunofluorescence, **Olink** targeted proteomics, fluorescence panels up to 24 markers, and **Biacore SPR** with ELISA for binding kinetics and affinity.
- **Study design a model can learn from.** Donor pooling with SNP demultiplexing so donor and run stay separable; multi–site QC across more than 700 donors, 8 organs and 23 immune diseases; automated library preparation on the **10x Chromium Connect**; held–out evaluation in reproducible Python and R pipelines.
- **Program execution and grant writing.** A humanized anti–CD40 program led from candidate ranking to non–human–primate studies and a registered patent in 2024. About \$1.3 million across five industry proposals, lead writer on four, always under the institutional PI and not as PI. K99/R00 and LSRF are open to me, and I would apply within the first two years.
