RESEARCH PROFILE

I am an immunologist with hands-on experience in Biacore SPR, ELISA, therapeutic antibody evaluation, and primary-cell functional assays. At PB Immune Therapeutics, I led anti-CD40 candidate evaluation and coordinated external studies from assay specification through data review and advancement decisions. I would bring binding measurements, experimental troubleshooting, and synthesis-and-testing coordination to the Keating Lab's peptide design campaign.

■ POSITION-RELEVANT EXPERTISE

- **Multi-modal cellular measurement.** 10× single-cell workflows, end-to-end GeoMx DSP, Visium spatial transcriptomics, MACSima cyclic multiplexed immunofluorescence, high-parameter flow cytometry, and Olink targeted proteomics.
- **Computational analysis.** Sequencing-data analysis in Python and R using statistical and machine-learning tools, multimodal integration, and donor- or case-level evaluation; co-authored an AIDD workflow spanning target discovery, binding prediction, virtual screening, and lead optimization.
- **Wet-lab and translational experiments.** Primary-cell culture and immune-cell functional assays; DNA, RNA, and protein workflows, including qRT-PCR, cloning, and Western blotting; SPR and ELISA binding assays.
- **Animal experiments.** EAE and Alzheimer's disease models; skin- and islet-transplantation studies; animal breeding, longitudinal immune monitoring, and non-human-primate sampling.
- **Program and study execution.** Multi-site sample QC, proposal writing, and project execution supporting approximately \$1.3 million in industry research funding.

- Co-author (methodology, single-cell analysis). Built the method that turns a meta-analysis of 8 skin-aging transcriptome datasets into gene sets and uses them to classify Alzheimer's disease in human brain transcriptomes. Reanalyzed 4 public skin and brain single-cell cohorts (295,243 cells and nuclei) with donor-level pseudobulk to map the candidate genes to specific cell types.*

■ TECHNICAL EXPERTISE

Therapeutic lead development	Humanized anti-CD40 antibody program from candidate comparison through non-human-primate studies. Assay design, external study coordination, raw-data review, regulatory documentation, and candidate-advancement decisions.
------------------------------	--

External studies and collaboration	CRO and core-facility study design, assay specifications, data review, and milestone tracking. Participation in outsourced antibody and AAV manufacturing collaborations involving Samsung Biologics and WuXi. Participation in early joint-development research with Merck, CSL, and Johnson & Johnson.
Single-cell / spatial / multi-omic	scRNA-seq, scTCR-seq, snRNA/snATAC; 10x 5'/3' library generation and 10x Chromium Connect automated preparation. Single-cell sequencing data analysis and interpretation in Python and R. Spatial: GeoMx DSP run end to end, Visium , MACSima cyclic multiplexed immunofluorescence.
Computational	Python, R, Linux, and Git ; scikit-learn, XGBoost/LightGBM/CatBoost, and PyTorch. Donor- or case-level validation and multimodal analysis of imaging, transcriptomic, and clinical data.
Cell, tissue & immunological assays	Primary human T-cell isolation, expansion and functional assays; monocyte and dendritic-cell differentiation; mesenchymal stem cell culture. Enzymatic tissue digestion, Percoll enrichment, cell and nucleus isolation. High-dimensional flow cytometry (panels up to 24 markers); multiplex panel design; 10-color 6-way FACS. Olink targeted plasma proteomics (immune & neurology panels).
Microscopy & animal models	Spinning-disk confocal (Nikon CSU-W1 SORA), point-scanning confocal (Leica SP8), two-photon; IHC/IF (frozen & FFPE) with quantitative image analysis. Non-human primates across three species (rhesus, cynomolgus, marmoset), including EAE and islet-transplantation studies; mouse immune profiling.
Binding kinetics and affinity	Biacore SPR and ELISA for affinity, kinetics, competition binding, receptor blockade, and cross-species comparison; functional validation in primary human T cells.
